Projects	
BLW-EAMS React, Vite, Node.js, Express, MongoDB, Tailwind CSS, JWT [Live Demo] [GitHub]	May 2026
- Architected an enterprise asset management platform featuring Role-Based Access Control (RBAC), JWT authentication, and Helmet security across 100% of routes. - Formulated work order tracking and asset lifecycle workflows with QR code tagging and analytical dashboards, decreasing maintenance downtime by 35%. - Implemented rate-limiting, sanitized queries, and structured REST APIs, maintaining database transaction consistency with sub-120ms response times.	
LocalDrop Next.js, TypeScript, WebRTC Data Channels, WebSockets, Tailwind CSS [Live Demo] [GitHub]	Mar 2026
- Engineered a serverless peer-to-peer file transfer engine leveraging WebRTC data channels and WebSocket signaling with zero server storage overhead. - Designed chunked binary streaming protocols and automated local subnet discovery, delivering 3x higher throughput compared to multi-hop cloud uploads. - Constructed a responsive Next.js web application with real-time transfer progress tracking, connection health indicators, and automatic reconnection logic.	
Chinh JavaScript (ES6+), Chrome Extension (Manifest V3), HTML5 File System API [Chrome Store] [GitHub]	Jan 2026
- Published an approved Chrome Web Store extension injecting in-context annotation overlays across ChatGPT, Claude, Gemini, and Perplexity for active users. - Deployed a local-first vault storage architecture using HTML5 File System Access API, writing atomic JSON backups directly to local disk for 100% data ownership.
